Subject: PCI/X Standby Current
Author: Sharon Yen
Location: Celestica - Salem NH
Date: 08-18-2004

The A2210 and A8440 servers provide the following typical standby current to the customer configurable rear PCI/X I/O expansion slots:

A2210: 210mA (total available to all slots)
A8440: 1A (total available to all slots)

Exceeding the available standby current may result in a non-bootable system condition.
